

Day6 Deploying and staging enviournment

- Create two branches main and checkout a branch for staging configure under project setting and add project_id , token , dataset and version and dont forget to add vercel host in cors setting in sanity .

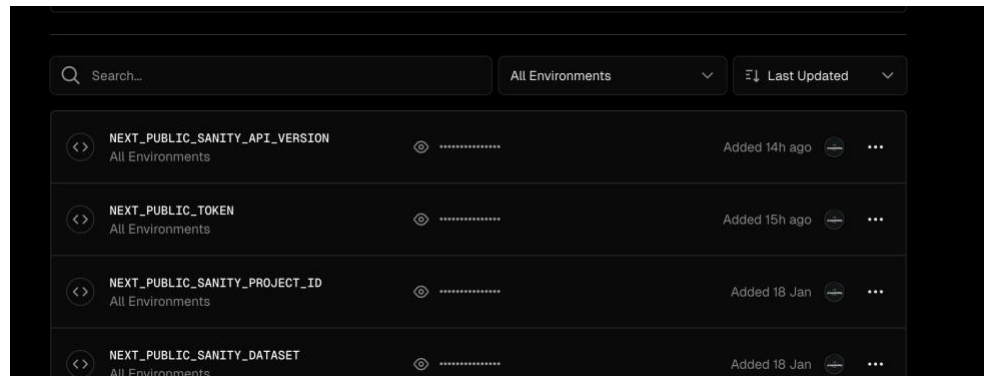

1. Deployment strategy

- Choose. Vercel recommended
- Interaction with sanity

i.

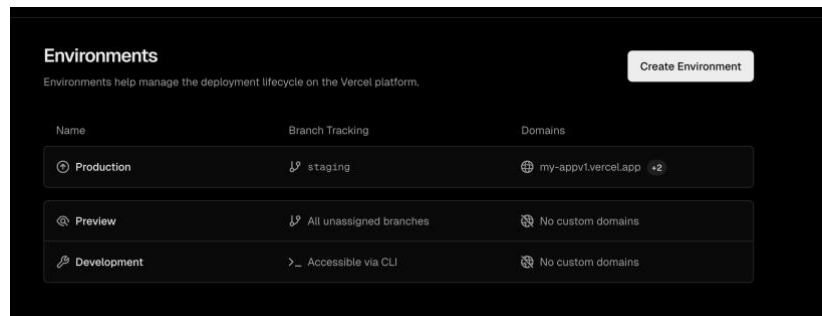

2. Environment variable

3. Staging enviournment

- checkout on github command with these command
 - git checkout -b staging
 - git push origin staging
 - In this project I have use cypress so I made 6 test cases
 - Dynamic routing – passed
 - Home navigate to about page -- -pass
 - Add to cart , update cart --- failed
 - Search filter --- failed
 - Category listing – failed
 - There is some problem using cypress
 - Regarding adding data on sanity the issue is with token

- Staging vercel link
- <https://my-appv1.vercel.app/>
-
